## Breachers' A.R.C. Advanced Respiration and Cutting System

The Breachers' A.R.C. is a new fully-modular system allowing side-by-side use of Broco's exothermic torch with respiratory protection. It was developed for serious breaching operations that often encounter smoke and gases that can derail or detain a forced entry or rescue operation. With the Breachers' A.R.C. operation momentum is sustained as operators breathe freely and utilize the portable power and speed of the Broco torch to destroy almost any obstacle.

The Breachers' A.R.C. features:

- comfortable backpack Molle platform with cylinder support enclosures
- battery bag
- rod extender and cutting rod holders
- pouches for mask, hoses, cable, and keeper clips

Users can custom configure the system to the immediate requirements of the operation including adaptation to a full-size torch with a self-contained breathing apparatus (SCBA) or mini-torch and SCBA among other solutions.
